

METHODS AND APPARATUS INCLUDING AN IMPROVED USER INTERFACE FOR
PROVIDING CUSTOM HAIR COLORING PRODUCTS TO A USER

Abstract of the Invention

There is provided methods and systems enabling untrained customers to operate a hair colorant mixing machine. Graphical interfaces are provided to the customer enabling her to identify her existing hair color and to select a desired change to that hair color. Responsive to the existing hair color and the desired change, using packaged dyes and chemicals, the machine formulates a custom hair colorant, mixes that colorant and packages and dispenses that colorant to the customer.
